

Package org.apache.commons.pool2.impl

Object pooling API implementations. 对象池接口实现

See: [Description](#)

| Interface Summary | |
|--|--|
| DefaultPooledObjectInfoMBean | The interface that defines the information about pooled objects that will be exposed via JMX. 定义池对象的信息 |
| EvictionPolicy<T> | To provide a custom eviction policy (i.e. 自定义驱逐策略 |
| GenericKeyedObjectPoolMBean<K> | Defines the methods that will be made available via JMX. |
| GenericObjectPoolMBean | Defines the methods that will be made available via JMX. |

| Class Summary | |
|--|---|
| AbandonedConfig | Configuration settings for abandoned object removal. 配置被遗弃的对象的移除设置 |
| BaseGenericObjectPool<T> | Base class that provides common functionality for GenericObjectPool and GenericKeyedObjectPool . 提供GenericObjectPool的通用功能 |
| BaseObjectPoolConfig | Provides the implementation for the common attributes shared by the sub-classes. |
| DefaultEvictionPolicy<T> | Provides the default implementation of EvictionPolicy used by the pools. |
| DefaultPooledObject<T> | This wrapper is used to track the additional information, such as state, for the pooled objects. |
| DefaultPooledObjectInfo | Implementation of object that is used to provide information on pooled objects via JMX. |
| EvictionConfig | This class is used by pool implementations to pass configuration information to EvictionPolicy instances. |
| GenericKeyedObjectPool<K, T> | A configurable KeyedObjectPool implementation. |
| GenericKeyedObjectPoolConfig | A simple "struct" encapsulating the configuration for a GenericKeyedObjectPool . |
| GenericObjectPool<T> | A configurable ObjectPool implementation. 一个可配置的对象池实现 |
| GenericObjectPoolConfig | A simple "struct" encapsulating the configuration for a GenericObjectPool . |
| PooledSoftReference<T> | Extension of DefaultPooledObject to wrap pooled soft references. |
| SoftReferenceObjectPool<T> | A SoftReference based ObjectPool . |

Package org.apache.commons.pool2.impl Description 包描述

Object pooling API implementations.

[GenericObjectPool](#) ([GenericKeyedObjectPool](#)) provides a more robust (but also more complicated) implementation of [ObjectPool](#) ([KeyedObjectPool](#)).

[SoftReferenceObjectPool](#) provides a [SoftReference](#) based [ObjectPool](#).

See also the [org.apache.commons.pool2](#) package.
